

incoming 2nd Year	Queen Mary University London Studying BEng Computer Science - current GPA 84%	University
GCSE and A Level	Sutton Grammar School Received nine 9s, two 8s and a 7 at GCSE. Received 4 A's at A-Level studying Mathematics, Further Mathematics, Physics and Electronics.	School

SKILLS		
Languages:	Python, Javascript ES6, PostgreSQL, MySQL, HTML5, CSS3, C++, Assembly, Java	
Technologies:	Keras, Tensorflow, Pandas, Matplotlib, spaCy, numpy, seaborn, plotly, Django, Flask, SQLAlchemy, JQuery, Bootstrap, PyTorch, Trax, Huggingface	

PROJECTS		
Data Science (NLP)	Tweet Classifier As a 1-man team, I took part in the IBM Z Datathon, creating a tool for job recruiters that webscrapes a user's twitter posts, and flags those that are offensive/hateful for further analysis, achieving 95% train accuracy, using langchain to check for offensive traits over series of messages rather than just relying on obvious clues from individual messages..	Datathon Submission
AI Safety	Risklab A system for measuring, analyzing, and governing manipulative behavior in LLMs - without relying on Human in the Loop approaches or LLM-as-a-judge, which are expensive computationally, in terms of time and/or in terms of money. Utilising classical ML techniques like sentiment analysis (through classification models) as well as a novel council-of-judges approach, as well as a system to raise conversations for human review.	Apart Research Sprint
Reinforcement Learning	DeepQ learning environment for web agents Tabular Q-learning agent that learns to navigate a mirrored version of the Windsurf website - as an example, obviously replaceable with any base URL as set in the program, using a curriculum of navigation tasks which are automatically generated. Includes code to turn any web site into a crawlable local set of html files, including human intervention for pages which require human input like login forms.	Iterate RL Hack

EXPERIENCES/CERTIFICATES		
06/2025 - 08/2025	Data Analysis/AI Intern - Built dashboards tracking lead retention and provided a basic unified interface for all parts of the marketing pipeline. - Worked on scripts for area-based pricing prediction, estimating yield over varying periods of time factoring in development costs, and market analysis for similar businesses in the student accommodation space. - Built a RAG-based chatbot for fiftyonelondon's lead generation, designed to be able to be integrated both on the website and as a whatsapp assistant for sales representatives, hosted remotely on an AWS instance. - For all tools developed, created details instructions on implementation and usage as well as bundled exe files and GUI creation as a lot of the intended users aren't programmers. - Leading and overseeing all technical development as the tech lead. Django / Python / SQL / Monday.com / Front.com / Webhooks	SAV Group
01/2025 - Present	Cofounder/ Fullstack + AI Engineer - Working on the main site using a django stack with Supabase database, hosted on an EC2 instance. - Writing a whatsapp bot for onboarding users to the platform and maintaining conversation using Langchain. - Developing a system allowing for generation of embeddings being generated for each user to simulate human activity in agent-to-agent interactions. - Coding a MCP server to allow custom functions for our key agent. - Aiming to launch the product by/during 10/2025. Django / Python / SQL / Twilio / Docker / AWS / Langchain	OneSoul
09/2024 - 03/2025	AI Engineer - Created a chat service on whatsapp via twilio - Aggregated house-based data from government sources as well as Rightmove/Zoopla - Created a google docs bot for generating urban planning documents for given areas using gpt to gather relevant sources then doing analysis. Django / Selenium / Python / SQL	Propmoolah
05/2024 - Present	Cofounder / AI Engineer - Delivering order book simulations on asset classes including cryptocurrencies, FX, Fixed Income and commodities. - Implemented Django routing to deliver live data from the simulation via Celery. - Designed the simulation mechanic for bots Django / Selenium / Python / SQL	ReadyTraderOne
01/2024 - 05/2024	Email writing for CRM - AI Engineer Role is in developing a system using webscraping and a person's name in order to extract information about their skills and where they work. This is then used to fill in email templates which are then sent to them. Huggingface / Selenium / Python / SQL / Gradio	Venu.AI
Data Science	IBM Data Science Professional Certificate What is Data Science; Tools for Data Science; Data Science Methodology; Python for Data Science, AI & Development; Python Project for Data Science; Databases and SQL for Data Science with Python; Data Analysis with Python; Data Visualization with Python; Machine Learning with Python; Applied Data Science Capstone Pandas / Numpy / Python / Dash / Folium / Matplotlib / SQL / SciPy / Scikit-learn	Coursera

Maths/ML	Mathematics for Machine Learning Coursera Linear Algebra for Machine Learning and Data Science; Calculus for Machine Learning and Data Science; Probability & Statistics for Machine Learning & Data Science Pandas / Numpy / Python / Matplotlib / SciPy / Scikit-learn
Deep Learning	Deep Learning Specialization Coursera Neural Networks and Deep Learning; Improving Deep Neural Networks: Hyperparameter Tuning, Regularization and Optimization; Structuring Machine Learning Projects; Convolutional Neural Networks; Sequence Models Python / Keras / Tensorflow / Numpy / Pandas
NLP	Natural Language Processing Specialization Coursera Neural Networks and Deep Learning; Improving Deep Neural Networks: Hyperparameter Tuning, Regularization and Optimization; Structuring Machine Learning Projects; Convolutional Neural Networks; Sequence Models Python / Trax / Huggingface / Numpy / Google Colab
AI Safety	Technical AI safety certification Bluedot Impact alignment and RLHF; mechanistic interpretability; scalable oversight; evaluations and red-teaming; AI control Python / PyRIT / RAMPART / Google Colab
Business + AI	AI Ventures Hackathon - 3rd prize Imperial Business School - We were a team of four that developed a system that ensured the competence of students submitting essays for within a school setting. We placed 3rd in this competition. - We accepted an essay as input from students, then generated questions based on the essay - and tested students using a video interview. To stop people cheating in this, we used gaze detection in order to ensure people kept their eyes on the screen without consulting external resources. Teachers can then log in, and view student submissions, as well as the questions they were asked and the videos they produced. Also had a service which performs sentiment analysis on the student's clips, to potentially identify areas of trouble. SQL / Python / Flask / HTML / CSS / Javascript / Sqlalchemy / OpenAI / wtforms

OTHER

Tools	Developer Tools VSCode, PyCharm, git, GitHub, Azure, Heroku, PythonAnywhere, Vim, Nano, Linux
Certificates	Other Certificates - Natural Language Processing with Classification and Vector Spaces - Coursera - Harvard's CS50W's Web Programming with Python and Javascript - AWS Certified AI Practitioner Miscellaneous 8.0 in TMUA; Lead web development for a now discontinued project designed to receive data from a satellite we would launch into space; Silver division USACO; top 10% in Europe Reply Challenge 2022; participated and got 63 in BIO round 1; Cyber Discovery 2019 – qualified for the second round of this, penetration testing style tasks; JMC – 2 * Gold certificate, 2 * Best In School, 2 * Qualified for Olympiad; JMO – 1 * Merit; IMC – 1 * Best In School, 1 * Best In Year, 2 * Gold Certificate, 2 * Qualified for Olympiad; Cayley Olympiad – 1 * Bronze Medal; SMC – 2 * Best In School, 3 * Qualified for Olympiad, 3 * Gold Certificate; BMO1 – 1 * Merit, 1 * Distinction, 1 * Qualified for BMO2.
